

Stockholm June 7th, 2007

Letter of reference for Asta Mail

I met Asta for the first time at the undergraduate course “Natural Resources and Society” at the Department of Systems Ecology, Stockholm University. During one month in spring 2007 she attended the project "Use and Conservation of running waters in the Stockholm Metropolitan area". She was an excellent co-worker in the project, working independently and diligently, full of ideas and always willing to discuss and communicate her thoughts.

Asta has the capacity to learn very fast. Also her knowledge and understanding of modern ecology and Conservation biology was of great value.

Asta has without doubt the potential for a successful scientific career. I don't have knowledge on the results from her examinations but she is motivated, has a high intellectual capacity and can communicate scientific results. With the qualifications also comes her integrity but she is devoted to science and I recommend her for scholarships and admission to PhD studies. If there are any further questions I would be happy to answer them.

Sincerely,

Stefan Lundberg
